

TERiX EXPANDS FOOTPRINT IN CANADA

Move Adds French-Language Skills; Supports Global Growth Plan

SUNNYVALE, CA (Oct. 1, 2009) – Taking advantage of what it believes is an underserved support market, TERiX Computer Service announced today that it has expanded direct coverage and support offerings in Canada’s major cities.

“The time is right to offer Canadian companies viable alternatives to expensive OEM support offerings,” said Bernd Appleby, TERiX President and CEO. “With a single stroke, TERiX is providing multi-vendor hardware and software support for enterprises of all sizes, including large datacenters, at a time when everyone is seeking to reduce costs without compromising service quality. Terix offers choice without risk.”

“Our international strategy for 2009 includes Canadian expansion and French-speaking business offerings,” said Jim Olding, TERiX Managing Partner and Executive Vice President. “We’re growing by leaps and bounds in Europe and Asia Pacific regions and a direct Canadian expansion has been planned for some time.”

TERiX services will be expanded with local offices and Regional Stocking Locations at major cities including Montreal, Quebec, Ottawa, Calgary and Toronto as part of the roll out.

“We know our existing client base in Canada validates the better service, better value offering.” Olding added. “Our presence will accelerate our growth and our reach, plus serve areas that require French-language skills. Canadian companies are now clamoring for choice as they address their IT spend, and the time is now for Terix to address the gap.”

TERiX is offering its complete “better service better value” proposition and all of its current offerings provided in the US and 48 countries are available to the Canadian market, including SUN, IBM, HP or Dell servers and EMC, NetApp or STK storage. TERiX traditionally offers service at a greatly reduced price from OEMs, while increasing service satisfaction.

About TERiX
